

# DB Wood High Risk Portfolio

## Model Portfolio Factsheet

March 2022

### Portfolio Objectives

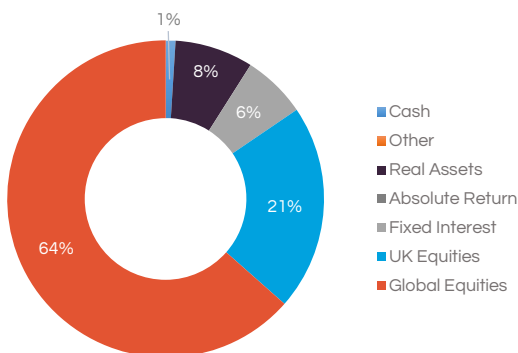

The high risk portfolio aims to achieve a moderate return over a rolling five-year time horizon by running an equity based mandate. The portfolio is invested in funds, both active and passive, with underlying investments diversified across all major asset classes: equities, fixed income, absolute return and property.

Risk is controlled through fund selection and asset allocation and the portfolio is rebalanced quarterly to minimise portfolio drift.

Basis of return: total gross return net of annual management charges, bid to bid basis. The figures do not include any initial charge. You should be aware: pension and life fund performance differs from unit trust/OEIC performance, due to the underlying tax treatment. Past performance is not a reliable indicator of future returns. The value of any investment can go up and down, and investors may get back less than they invested. A small portion of the portfolio may be invested in illiquid assets, meaning you may not be able to buy or sell units in those assets during uncertain times.
