

DB Wood Low Risk Portfolio

Model Portfolio Factsheet

August 2024

Portfolio Objectives

The low risk portfolio aims to achieve a modest return higher than cash over a rolling five-year time horizon. Its main objective is to achieve sustainable growth whilst protecting capital.

The portfolio is invested in actively managed funds, with underlying investments diversified across all major asset classes: equities, fixed income, absolute return and property.

Risk is controlled through fund selection and asset allocation and the portfolio is rebalanced quarterly to minimise portfolio drift.

*On-going Fund Charge = Total percentage fee charged by the underlying funds expressed as a weighted average.

	YTD	6 Months	1 Year	3 Years	5 Years
Portfolio	4.27%	5.56%	10.39%	3.42%	13.90%
Benchmark	2.63%	3.72%	7.58%	-2.20%	6.32%
FTSE 100	8.00%	12.04%	12.99%	33.40%	32.82%

Basis of return: total gross return net of annual management charges, bid to bid basis. The figures do not include any initial charge. You should be aware pension and life fund performance differs from unit trust/OEIC performance, due to the underlying tax treatment. Past performance is not a reliable indicator of future returns. The value of any investment can go up and down, and investors may get back less than they invested. A small portion of the portfolio may be invested in illiquid assets, meaning you may not be able to buy or sell units in those assets during uncertain times.
